

How To Care For Your Lashes

Faux Mink and Mink lashes are known for their *durability* and *superior quality* which is why Casablanca Beauty® lashes are reusable up to 30 times if properly cared for. To ensure that you get the most of your Casablanca Beauty® lashes, it is essential that you follow the below do's and don'ts.

DO:

- Be gentle - When removing your lashes be as gentle as when you applied them.
- Remove glue - use a pointed tweezer to very gently remove any excess glue from the lashes after every wear.
- Store safely in their box - use the original box or casing to keep your lashes safe and clean.
- Avoid mascara - Mascara, especially waterproof mascara, can damage mink so try to use as little as possible. If necessary, apply mascara on your natural lashes and allow it to dry before applying your Casablanca Beauty® mink lashes.
- It is recommended to use Casablanca Beauty® Eyelash Applicator tool when applying and removing to minimize natural oils from your hands and fingertips in order to keep the lashes in the best condition as possible.

DON'T:

- Don't soak in water - never soak your lashes in water or any other liquid as it may ruin the shape and curl of the lash. You may quickly rinse them and leave them to dry when needed.
- Don't tug or pull on the lash when removing glue - Treat your mink lashes the same way you treat your natural lashes and be very gentle when cleaning them.
- Don't use oil-based solutions or harsh chemicals - Any oil residue will repel the eyelash glue from sticking to your lash band during the next application and it will damage and weaken the construction and look of your mink lashes.
